Step two

In this step we will create a CryptoCurrency market price tracker. We will use redis as a database and python as a programming language.

also we will use docker to run redis and python-Django.

use redis cache to store data and use Django to get data from API and show it to user.

also use docker Volumes to store data in host machine.

also we nedd to create config file for redis annd Django.

config file contains:

- Django server port
- redis keys expire time: default 5 minutes
- CoinAPI API key
- · Step two
 - o 2.1
- Result

 - Containers list

System stats

2.1

First we need to pull redis image and make container from pulled image

```
docker pull redis
docker run --name redis_net -d redis
```

Result

```
amads/uni/7/Cloud/HW/cloudCompunting-HWs$ docker pull redis
Using default tag: latest latest: Pulling from library/redis

                                                                           Up 52 seconds
                                                                                             6379/tcp
```

2.2

In this step we will create Django project and app and make image from it. then push this image to docker hub.

2.2.1

Create a Django project

```
django-admin startproject crypto
```

2.2.2

Create a Django app

```
cd crypto
python manage.py startapp cryptoApp
```

2.2.2.1

Create a class in Views.py file for get data from API and show it to user

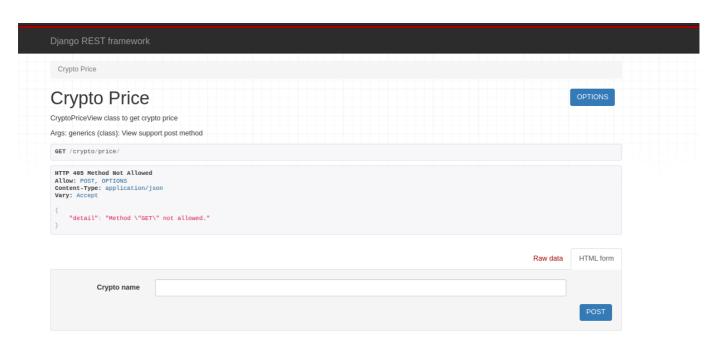

and create a urls.py file for routing

create Serializer class in serializers.py file for serialize data

change settings.py file for add app

and add urls.py file for routing

Results

2.2.3

Create a requirements.txt

```
Django==4.1.4
django-cors-headers==3.13.0
djangorestframework==3.13.1
requests==2.26.0
requests-toolbelt==0.9.1
requests-unixsocket==0.2.0
redis==3.5.3
```

2.2.4

Create a Dockerfile in crypto directory and run Django server

```
FROM python:3.8
ENV PYTHONUNBUFFERED 1
```

```
RUN mkdir /code
WORKDIR /code
COPY requirements.txt /code/
RUN pip install -r requirements.txt
COPY . /code/
CMD python manage.py runserver
```

2.2.5

Make image from Dockerfile

```
docker build -t crypto .
```

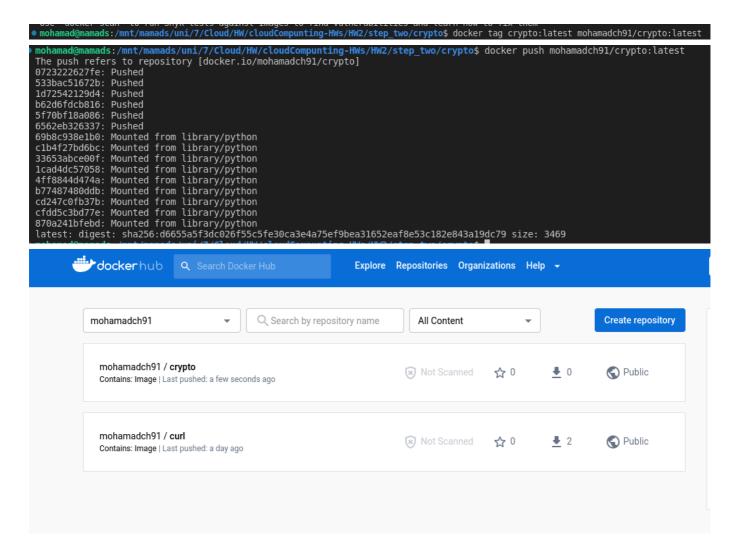

Result

2.2.6

Push image to docker hub

```
docker tag crypto:latest mohamadch91/crypto:latest
docker push mohamadch91/crypto:latest
```

Result

2.3

In this step we need to create config file for Django and redis

Create a .env file for Django and redis in Dockerfile

```
CACHE_TTL=300
REDIS_HOST=redis
REDIS_PORT=6379
DJANGO_PORT=8000
COINAPI_KEY=YOUR_API
```

2.3.1

Change setting.py file for env

```
runserver.default_port = os.environ.get('DJANGO_PORT', '8001')
COINAPI_KEY = os.environ.get('COINAPI_KEY', 'Your key')
```

```
CACHE_TTL=os.environ.get('CACHE_TTL', '350')
```

2.4

In this step we need to create volumes for redis

```
```bash
docker volume create redis_data
```
```

Result

```
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs/HW2/step_two/crypto$ docker volume create redis_data
redis_data
```

```
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs/HW2/step_two/crypto$ docker volume ls
DRIVER     VOLUME NAME
local     09a50a9dfa1c72266a762bf1a082d953546d21ad691c8b4d6ca748103b57af4b
local     2830c5a184e11f42dcd3ab562acee7d82c791951ac634cc2ace1e9a0ab66614c
local     redis_data
```

2.5

In this step we need to create network for redis and Django

```
docker network create crypto
```

Result

```
mads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs/HW2/step_two$ docker network create crypto
2ce16bc4a975d85ee7ca32eb0f64755298861f95dd1c92930a0ccf4215e90d1c
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs/HW2/step_two$ docker network ls
NETWORK ID
               NAME
                         DRIVER
                                    SC0PE
b19675701a96
               bridge
                          bridge
                                    local
2ce16bc4a975
               crypto
                         bridge
                                    local
b6b5fc87a0d7
               host
                         host
                                    local
87ae36e02aa6
                          null
                                    local
               none
```

2.6

now we need to write docker-compose.yml file for run redis and Django to volume and network

compose file

2.7

now we run de compose file

```
docker compose up -d
```

Results

```
mohamad@mamads:~/Desktop/uni/7/Cloud/HW/cloudCompunting-HWs/HW2/step_two/crypto$ docker compose up -d
[+] Running 2/2

:: Container redis_net Started
:: Container crypto Started
:: Container crypto Started
:: Container crypto Started
```

• env file

```
You, 2 minutes ago | 1 author (You)

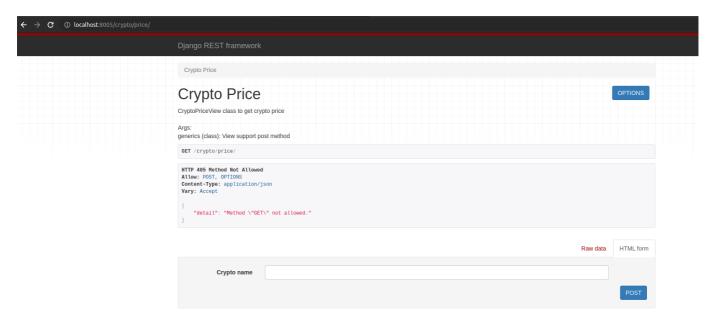

CACHE_TTL=300 You, 2 minutes ago • fix: compose f

REDIS_PORT=6379

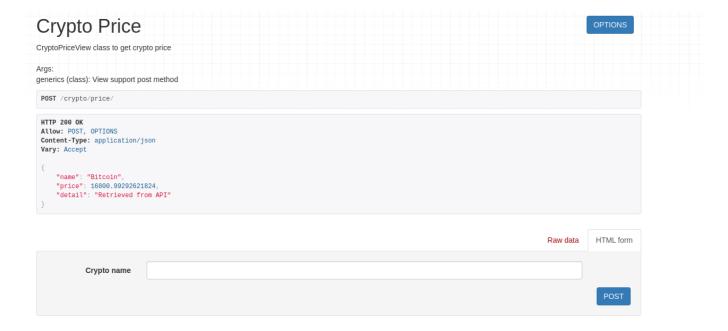

DJANGO_PORT=8005

COINAPI_KEY='CBAD064B-9F00-4FD3-8C61-8C6E09B9E4B0'
```

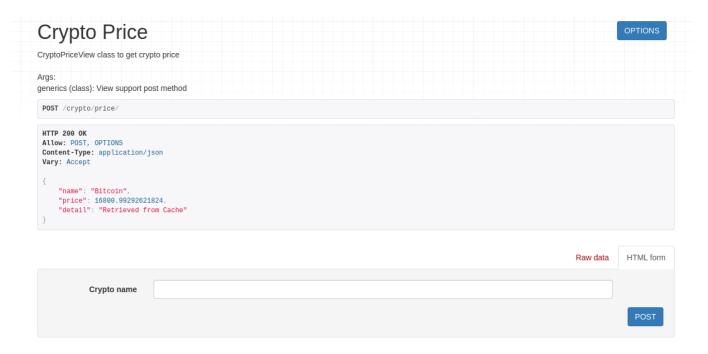

we see upcoming on port 8005

Get btc data

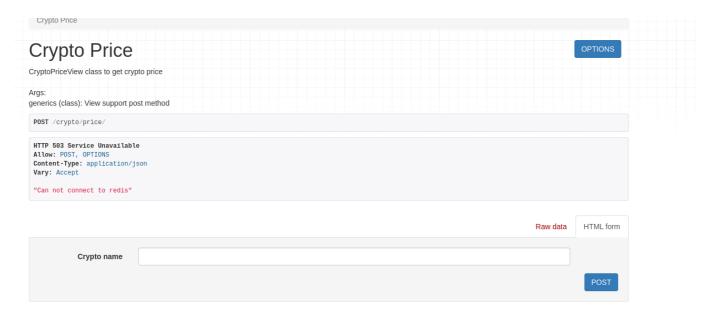

Get btc for second time

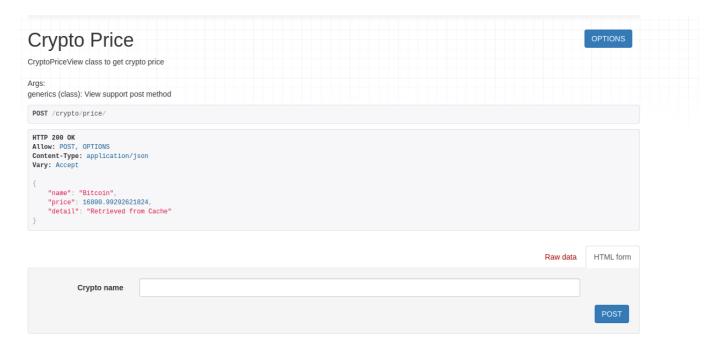

Remove redis

```
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs$ docker stop redis_net
redis_net
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs$ docker rm redis
Error: No such container: redis
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs$ docker rm redis_net
redis_net
mohamad@mamads:/mnt/mamads/uni/7/Cloud/HW/cloudCompunting-HWs$
```

API response on no redis

Start again redis and check API
